3. BUSINESS-REQUIREMENT:

As an application developer, develop the Learning Management System App (Single Page App) with below guidelines:

User Story #	User Story Name	User Story
US_01	Home Page	As a user I should be able to visit the home page as default page, where I can see a form to create or update the user, list of all users with options to edit and delete any user and in last two should be a form to search any product on its title or start date criteria.
US_01	Home Page	<p>As a user I should be able to see the homepage and perform all operations:</p> <p>Acceptance criteria:</p> <ol style="list-style-type: none">As a user I should be able to furnish following details at the time of creating user.<ol style="list-style-type: none">TitleDescriptionInstructorDurationStart dateEnd dateSyllabusCreate button should be disabled until all fields are validated.Update button should be displayed when you click on Edit button.Title, Description, Instructor, Duration, Start date fields are mandatory. If any of these filed is missing or if any constraint is not satisfied then must show a message.Form control names should be case sensitive and they should be like as follows: title description instructor duration startDate

		endDate
		syllabus

4. EXECUTION STEPS TO FOLLOW FOR FRONTEND

1. All actions like build, compile, running application, running test cases will be through Command Terminal.
2. To open the command terminal the test takers, need to go to Application menu (Three horizontal lines at left top) -> Terminal ->New Terminal.
3. This is a web-based application, to run the application on a browser, use the internal browser in the environment.
4. You can follow series of command to setup Angular environment once you are in your project-name folder:
 - a. npm install -> Will install all dependencies -> takes 10 to 15 min
 - b. npm run start -> To compile and deploy the project in browser. You can press <Ctrl> key while clicking on localhost:4200 to open project in browser -> takes 2 to 3 min
 - c. npm run test -> to run all test cases. **It is mandatory to run this command before submission of workspace -> takes 5 to 6 min**
5. You need to use **CTRL+Shift+B** - command compulsorily on code IDE, before final submission as well. This will push or save the updated contents in the internal git/repository, and will be used to evaluate the code quality.
